Oxidation levels

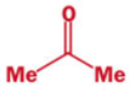

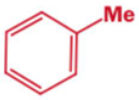

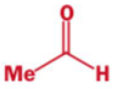

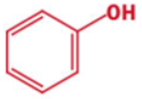

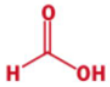

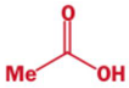

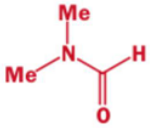

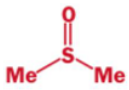

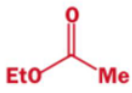

- Bonds to hydrogen or other elements more electropositive than carbon contribute to -1 to the oxidation level.
- Bonds to other carbon atoms contribute 0 to the oxidation level.
- Bonds to oxygen or other elements more electronegative than carbon contribute +1 to the oxidation level.
- Multiple bounds to an element count as multiple single bonds to that element.
- A pair of electrons on carbon contribute -1 to the oxidation level.
- A positive charge on carbon contribute +1 to the oxidation level

Important structures to learn

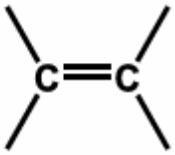

acetone		toluene	
ether or diethyl ether		pyridine	
acetaldehyde		phenol	
formic acid		THF (tetrahydrofuran)	
acetic acid or AcOH		DMF or (dimethylformamide) Me_2NCHO	
benzene		DMSO (dimethylsulfoxide)	
ethyl acetate or EtOAc
